

Marc A Flores Mendoza

New York, NY

marcanthflores@gmail.com — linkedin.com/in/marcfloresmendoza — github.com/marcaflores

Education

City University of New York, College of Staten Island

New York, NY

Bachelor of Science in Computer Science

Expected May 2027

Associate of Applied Science in Computer Technology Programming

May 2026

GPA: 3.7/4.0

Relevant Coursework: Data Structures and Algorithms, Analysis of Algorithms, Object-Oriented Programming, Database Systems, Software Engineering, Modern Web Development, Computer Organization,

Skills

Languages: Python, C++, C, JavaScript, TypeScript, SQL, HTML/CSS, Bash

Frameworks/Tools: React, Next.js, Node.js, Flask, Git, GitHub, Linux, PostgreSQL, MySQL, Supabase, Vite

Concepts: REST APIs, Data Structures, Algorithms, OOP, Debugging, Multithreading, Relational Databases, System Design

Productivity: Microsoft Office, Google Workspace

Languages Spoken: Spanish

Professional Experience

CUNY High Performance Computing Center

New York, NY

Software Engineering Intern

2025 - Present

- Built a multi-source academic publication scraper that cross-references researcher roster and to automatically attribute publications to the correct author.
- Designed and built a Flask REST API with token-based, scope-restricted authorization, exposing endpoints for publication search, per-researcher citation rollups, and on-demand or batch crawl execution.
- Developed deduplication and normalization logic to merge overlapping records from multiple external data sources into a single consistent publication store.
- Restyled the React frontend to design standards and added dashboards for browsing aggregated publication and citation data.

Projects

Scholar Spider – Academic Publication Search Platform

2026

Student Project — Python, Flask, React, PostgreSQL, Psycopg3, Linux

- Designed a normalized PostgreSQL database to organize and relate 1,000+ publication records, enabling efficient search, retrieval, and reporting across interconnected data.
- Engineered an automated data pipeline using Python and Psycopg3 to aggregate, validate, and deduplicate records from multiple external sources using DOI-based matching.
- Developed a full-stack web application with Flask, React, and REST APIs, implementing endpoints for publication search, retrieval, and database management.

PayCore – Payroll Management Web Application

2026

Project Contributor — Next.js, TypeScript, Tailwind CSS, React, Supabase

- Architected a reusable React component system and data visualization layer using Tailwind CSS and Recharts, establishing a consistent interface across the application.
- Redesigned a multi-tab interface into a unified responsive layout, consolidating six data modules while reducing redundant state-management logic.
- Diagnosed and resolved a client-side authentication race condition that intermittently prevented users from accessing their data by deriving user identity from the active session.
- Implemented role-based data access controls using strongly typed data contracts and dynamic query scoping, with sanitized fuzzy search to protect against unsafe and unbounded queries.
